CAREER OBJECTIVE

To be in a professional position in a progressive organization that allows me to enhance and utilize my education and skills for the upliftment.

ABOUT

I am a dedicated Full-Stack Web Developer with a focus on the MERN stack. Passionate about building innovative and scalable web applications, I have honed my skills through independent learning and hands-on experience. My adaptability and problem-solving abilities have been developed through tackling complex challenges in personal projects, and I am eager to bring these skills to contribute to impactful, cutting-edge projects.

EDUCATION

- **Kannur University** — Kannur, Kerala
  Bachelor of Computer Application — [75%] - 2019 - 2022

- **Maitexa Info Solutions LLP** — Calicut, Kerala
  MERN Stack Development — 2023

SKILLS SUMMARY

- **Languages**: JavaScript, OOP
- **Back-End**: Node.js, Express.js, MongoDB
- **Front-End**: Reactjs ,Nextjs , Redux, Tailwind CSS, Bootstrap, HTML, CSS, JavaScript
- **Integration Tools**: Razorpay, NodeMailer, Multer, JWT
- **Development Tools**: GIT, Figma, Visual Studio Code, GitHub, Postman
- **Platforms**: Linux, Windows
- **Architecture**: MVC architecture, RESTful API

PROJECTS

- **E-kart - E-Commerce Platform**:

  - Developed **E-kart**, a fully-featured e-commerce platform with a **Node.js** and **Express.js** backend, **React.js** frontend, and **MongoDB** as the database.
  - Adhered to **MVC architecture** and **REST API principles** throughout the platform development.
  - Implemented secure user authentication with **OTP-based email verification** using **Nodemailer**.
  - Enabled users to manage their shopping experience, including: Adding products to a cart, Making purchases, Maintaining a wishlist.
  - Integrated multiple payment options, including: Wallet payments, Cash on delivery, Online payments through **Razorpay**.
  - Provided features such as: Order tracking, Order cancellation, Referral system for earning rewards.
  - Equipped administrators with tools for: User and order management, Managing products, categories, and time-limited offers.

  Key technologies used: React.js, Tailwind CSS, Redux, JavaScript, Node.js, Express.js, MongoDB, GitHub
  Git repo: https://github.com/ajinas001/Ecommerce-store

- **Meddical - Hospital Management System**:

  - Developed **Meddical**, a comprehensive hospital management web application using a **Node.js** and **Express.js** backend, **React.js** frontend, and **MongoDB** database, designed to streamline patient and doctor interactions.
  - Implemented secure user authentication with **JWT** (JSON Web Tokens) to ensure that patient and doctor data is accessed only by authorized users, providing both role-based access and data privacy.
  - Enabled patients to book appointments, make payments, and monitor their position in the queue through a live token status feature, enhancing the overall patient experience.
  - Provided doctors with tools to manage patient records, appointment details, and edit their duties, improving workflow efficiency within the hospital.
  - Integrated **Razorpay** for seamless online payments, offering multiple payment options to patients for a convenient transaction process.
  - Focused on delivering a smooth and responsive user experience by utilizing modern web technologies and ensuring the application is user-friendly across all devices.

  Key technologies used: React.js, CSS, Bootstrap, JavaScript, Node.js, Express.js, MongoDB, JWT, Razorpay, Multer

  Git repo: https://github.com/ajinas001/hospitalproject

- **Greenobooks - School Book Store**:
  - Developed a user-friendly application designed to simplify the book purchasing process for school students and their parents.
  - Enabled users to add books to a shopping cart, manage quantities, and calculate the total cost, enhancing the overall shopping experience.
  - Implemented a recommendation system that suggests relevant books based on grade levels or subject categories, helping users discover appropriate materials.

  Key technologies used: React.js, CSS, JavaScript,Laravel ,MySQL, GitHub
  Git repo: https://github.com/ajinas001/greenobooks

Mini project

- **Restaurant Advisor - Restaurant Recommendation App**:
  - Developed an webapplication that allows users to select their location and find top restaurants based on customer ratings.
  - Enabled users to add their own reviews and provided hotel admins with the capability to add and manage their restaurant properties.

  Key technologies used: React.js, CSS, JavaScript, Node.js, Express.js, MongoDB, GitHub
  Git repo: https://github.com/ajinas001/Restaurantadvisor

Live Projects

- **Zahrat Alreef - Electrical and Sanitaryware Store Website**:
  - Developed a robust web application for an electrical and sanitaryware shop, enabling users to browse an extensive product catalog.
  - Implemented features allowing customers to connect with the shop and submit inquiries seamlessly through the platform.
  - Designed the interface to display comprehensive shop details, including location, operating hours, and contact information, ensuring a user-friendly experience.

  Key technologies used: React.js, CSS, JavaScript, Tailwind, GitHub

  Live Link: https://zahratalreeftrading.com
- **Radish Grill and Cafe Website**:
  - Created an engaging and modern web application for Radish Grill and Cafe, showcasing the menu with categorized sections.
  - Integrated a user-friendly interface to highlight featured dishes, promotions, and ingredient details, using high-quality visuals to enhance the user experience.
  - Designed a responsive contact section for reservations and inquiries, with detailed café information such as location, hours, and contact details.

  Key technologies used: Next.js, React.js, Tailwind CSS, JavaScript, GitHub
